## Get Better Yields With Triathlon DNA!

Large-scale oligo synthesis of fragments from 50 to 150 bp is commonplace, but requires extensive purification steps to remove errors, typically resulting in poor yields. Now available from Vandalia Research is Triathlon, a PCR-based DNA production service which can produce high-quality DNA, replacing oligo synthesis at the 50+ bp scale. Vandalia Research DNA has the following benefits:

- DNA produced cell-free with no debris or contaminants to remove later.
- PCR-based, with a lower error rate than oligo synthesis.
- Linear, double-stranded DNA product.
- Custom end-labeling available.
- DNA from 50 bp to 4.5 kb has been produced with the Triathlon process.
