Leave Your Plasmid Prep Behind!

For most labs, making more than a few milligrams of DNA by plasmid preparation can be a time-consuming and costly process. With Vandalia Research's PCR-based Triathlon DNA Production Services, you can outsource your large-scale DNA production needs, and benefit from many advantages:

- We produce only your DNA of interest, not the entire plasmid.
- DNA produced cell-free with no debris or contaminants to remove later!
- Linear, double-stranded DNA product
- Custom end-labeling available.
- DNA from 50 bp to 4.5 kb has been produced
- Cost-competitive for most labs at the 10 mg scale.
- Fast turnaround! Typically 5-7 business days for initial 10 mg batch!

Plasma Construct

Rather than producing the entire plasmid construct, Vandalia Research will design custom primers to produce only the insert region of interest for the customer, saving time and money. For most applications, the resulting linear product is comparable, if not superior, to plasmid DNA. Additionally, this linear product can be labeled with a variety of molecules, increasing potential applications for the product.
